ATS COMPLIANT TEXT RESUME

This template represents the structural architecture of a direct digital export (Text-Selectable Word/PDF) that an Applicant Tracking System (ATS) can successfully parse.

Why text layers matter over scanned graphic images:

• When you export a document directly from a word processor as a PDF, it retains a distinct font layer that ATS parsers extract to analyze your skills and job history.
• When you scan a physical piece of paper into a PDF, it saves as a flat image map. The ATS parser cannot read the text, often resulting in an automated rejection.

Structural Architecture Sample:

John Doe | john.doe@email.com
Employment History:
Software Engineer at Tech Corp (2024-2026)
- Maintained primary codebase applications.
- Implemented API endpoints.
